

Solve problems with premature wear in your cast iron or steel castings

BSL Casting offers a wide range of alloys for parts with high wear resistant properties (hardness up to 700 BHN).

We recently replaced some cast iron impellers in a water treatment unit with new ones made from Ni-Hard iron alloy. The new alloy contributes to an extended life-expectancy because of the high abrasion resistance properties when the sand and stones are propelled through the impeller.

Wear resistant alloys available at BSL Casting : White iron / Ni-Hard / Ni-Resist / Ductile Ni-Resist.

Call to discuss your specific requirements with our experienced metallurgical engineers.
